MR. WEALE'S

SERIES OF RUDIMENTARY WORKS

FOR THE USE OF BEGINNERS.

Mr. Weale has prepared for publication, in a neat and convenient size, a series of original and useful Volumes, by the most esteemed writers, forming a Rudimentary Course for the easy comprehension of the leading principles of various Sciences.

It has been remarked that "those who are in the ship of Science ought to remember that the disciples cannot arrive without the aid of boats." Popular Treatises are to Science what boats are to large ships: they assist people in getting aboard. But as no one would trust himself to a weak and inefficient boat, so no one ought to begin the study of Science with an imperfect guide. It sometimes happens that popular treatises are made to appear easy by the omission of those very details which are most essential to be known: they state results without going through the necessary processes by which those results are gained: they deal largely in facts, and leave principles untouched.

The only method of avoiding this error is to confide to men who are masters of their respective subjects the task of drawing up Popular Introductions to the several branches of Science, as well as uniting elementary principles with practical applications. The Publisher trusts that the following list of names will be a sufficient guarantee to the Public that what he proposes to attempt in the cause of Popular Instruction will be done well; and that these little treatises will fully answer the purpose for which they are intended, namely, to become convenient and accurate Guide-Books in Popular Institutions generally, while their low price will place them within the reach of all classes earning their daily bread, to many of whom a knowledge of the elements, together with the practice, of the Sciences are positive gains in the common pursuits of life, as well as a means of winning from gross tastes, and presenting to the mind noble and worthy objects of study. The series, also, is extended to the Elemental and Practical Science of Mathematics, for those who desire to advance and perfect their studies.

The several Series are amply illustrated, in demy 12mo, each neatly bound in cloth; and, for the convenience of purchasers, the subjects are published separately at the following prices:

JOHN WEALE'S

THE

USE OF FIELD ARTILLERY ON SERVICE:

With especial Reference to that of an ARMY-CORPS. For Officers of All Arms.

TAUBERT, Captain and Battery Commandant, 8th Regiment Prussian Artillery.

Translated from the German by HENRY HAMILTON MAXWELL,

First Lieutenant Bengal Artillery.

With a vast military force in England and in India, and with all the elements of military greatness, we are undoubtedly deficient in that higher professional knowledge, without which true military vitality cannot effectually be maintained. In order to make this knowledge more accessible to the soldier and to the public at large, this Volume is charged on such terms that even the private, with his limited day's pay, may become a purchaser.

Also it is a faithful and careful translation from the German, by Lieut. Henry Hamilton Maxwell, of the Bengal Artillery, of an important Prussian work on the management and service of artillery, which (although thicker than the ordinary Rudimentary Volumes) the publisher is, through the liberality of Mr. Maxwell, enabled to issue at the price of 1s. 6d.
